## Agricultural Development Assistance Mapping

## How can ADAM help you?

ADAM gathers information from diverse databases to help you answer these questions:

- > What are the major agriculture issues in a country and who is doing what to address these challenges?
- > What is FAO's comparative advantage when facing these challenges?
- > How can I locate the right resource partner who can help me obtain the necessary funds?

Find us on the internet: <http://www.fao.org/tc/adam>

## Why ADAM?

Focused prioritization of resource partners' interventions in member countries has become a prerequisite to **improving development assistance** in line with country development objectives. With this in mind, FAO has developed a corporate Resource Mobilization and Management Strategy, which recognizes the need to increase the capacity of FAORs in strategic prioritization and resource mobilization at the country level.

## What does ADAM do?

- > Generates country, global and regional matrices, maps and charts showing cross-country aspects of Official Development Assistance (such as resource partner spending by country and priority sector; type of funding by country; etc).
- > Supports development strategy by guiding users to where assistance and funding will provide the best value for money and get to where it is needed most.

## How does ADAM do it?

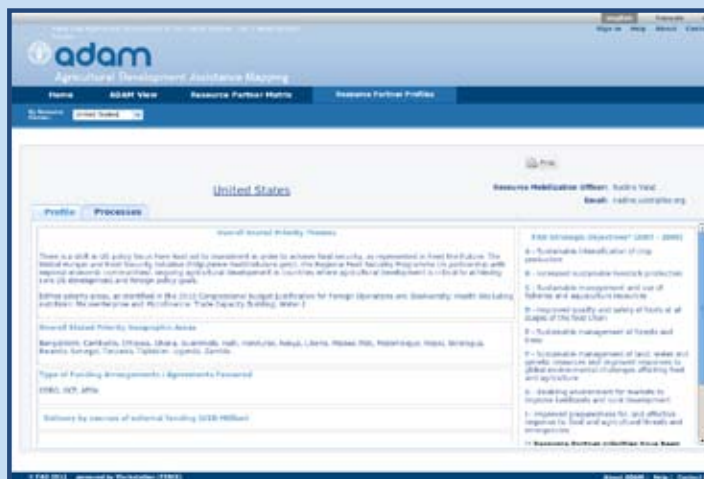

- > Mapping priorities and actual actions at country, regional and global level.
- > Providing supporting information to enhance the formulation of resource mobilization strategies.
- > Identifying various sources of funding of agriculture-related activities.
- > Providing inputs to determine FAO's comparative advantages versus other implementing agencies.
- > Ranking most likely resource partners for the implementation of FAO's country programme.

## What can an ADAM user do?

- > Easily retrieve and visualize data on country or donor priorities, areas of intervention, funding modalities and frameworks.
- > Filter and link these elements and statistically analyse them.
- > Create standard and ad-hoc reports (Charts and Maps) and outputs.

## ADAM View: Global and country information on ODA flows

Provides key elements about which resource partner is operating in the selected geographic contexts. ADAM View helps to match past and ongoing activities with resource partners and government's priorities.

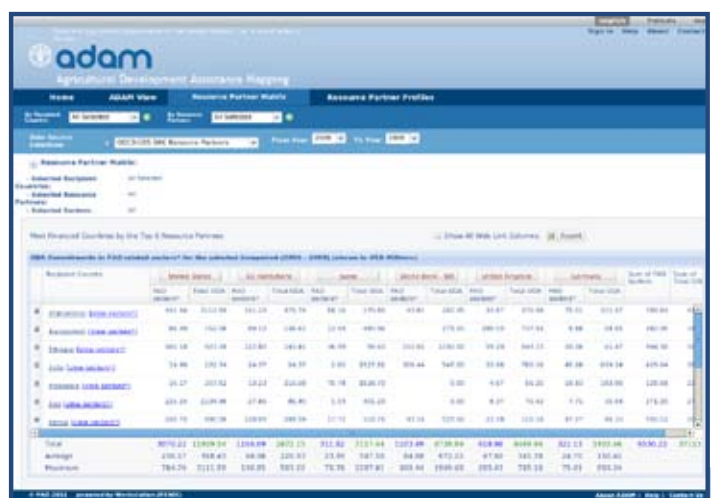

Resource Partner Matrix:  
Resource partners' commitments  
as total ODA and FAO specific  
areas of interest

The Matrix identifies resource partners that have contributed to a region or a country and provides preliminary indications on their likely interest in FAO-related activities.

## Resource Partner Profiles: Key information on FAO's resource partners

Resource Partners' stated priority themes and spending patterns, favored funding mechanisms and internal processes are all detailed.
